TRAINING 2000

CYBER SECURITY TRAINING COURSES

Training 2000's cyber security training courses provide essential staff training for employees – from technical training which helps to embed cyber security best practice throughout the company's infrastructure to staff awareness courses which are designed to build a resilient employee base across a business – from the boardroom to apprentice.

In the modern business world, nothing poses a greater threat than cyber-crime – which can damage organisations of every size, in every industry.

Costing billions of pounds a year – multi-million turnover corporations to sole traders are all potential targets for hackers, so maintaining an up-to-date, relevant cyber security strategy which is deployed and communicated throughout the organisation has never been more important than now.

SENIOR MANAGERS

Any robust cyber security strategy must begin with adoption from the top which sets the culture for the rest of the organisation – beginning in the boardroom.

This workshop is for key decision makers and influencers within businesses to prompt debate and discussion to identify where the company's exposure to risk comes from and how this can be addressed through an encompassing cyber security strategy.

Deliver Style: Workshop

Course Length: Half day

Delegates: Up to 12 per course

Audience: Board members, Directors, Senior Executives

MANAGERS TRAINING

Implementing a culture which understands the risks posed by cyber-crime is a large part of building up defences your business can rely on.

Managers and decision makers need to be alert of the dangers and how best to communicate this to their teams to maintain good cyber hygiene across all levels. This course will advise how to implement an escalation process and how to monitor best practice in the workplace.

Delivery Style: Classroom

Course Length: Full day

Delegates: Up to 12 per course

Audience: Managers, Team Leaders and Delegators

> **IT IS NOT A QUESTION OF IF, BUT WHEN CYBER-CRIME WILL IMPACT YOUR BUSINESS – THE ONLY WAY TO MITIGATE THE EFFECTS IS TO FULLY PREPARE YOUR DEFENCES, AND YOUR EMPLOYEES ARE YOUR FIRST AND LAST LINE OF DEFENCE**

EMPLOYEE AWARENESS

All staff members have a role to play in protecting the organisation against a data breach and to maintain best practice. Our interactive, hands on course is aimed at building the understanding of company gatekeepers, who often can make the difference which stops a cyber-attack in its tracks before it becomes a damaging breach.

Delegates will gain an understanding of their responsibilities for the security of company data, and where to implement practical cyber security processes into their everyday working lives.

This is 'health and safety for computers'.

Delivery Style: Classroom

Course Length: Full or half day

Delegates: Up to 12 per course

Audience: Computer-facing staff members

TECHNICAL TRAINING

This course focuses on upskilling technical IT staff to ensure that your company's digital systems are set up to mitigate common cyber threats.

Delegates will work through the very latest best practice for networks, access, configuration, device inventory, maintenance, back-ups, policies and data management, ensuring IT personnel are prepared for managing cyber security processes within the IT infrastructure.

Delivery Style: Classroom

Course Length: Full day

Delegates: Up to 12 per course

Audience: IT Directors, Managers, Support and Technical Staff
